Haunted Devices

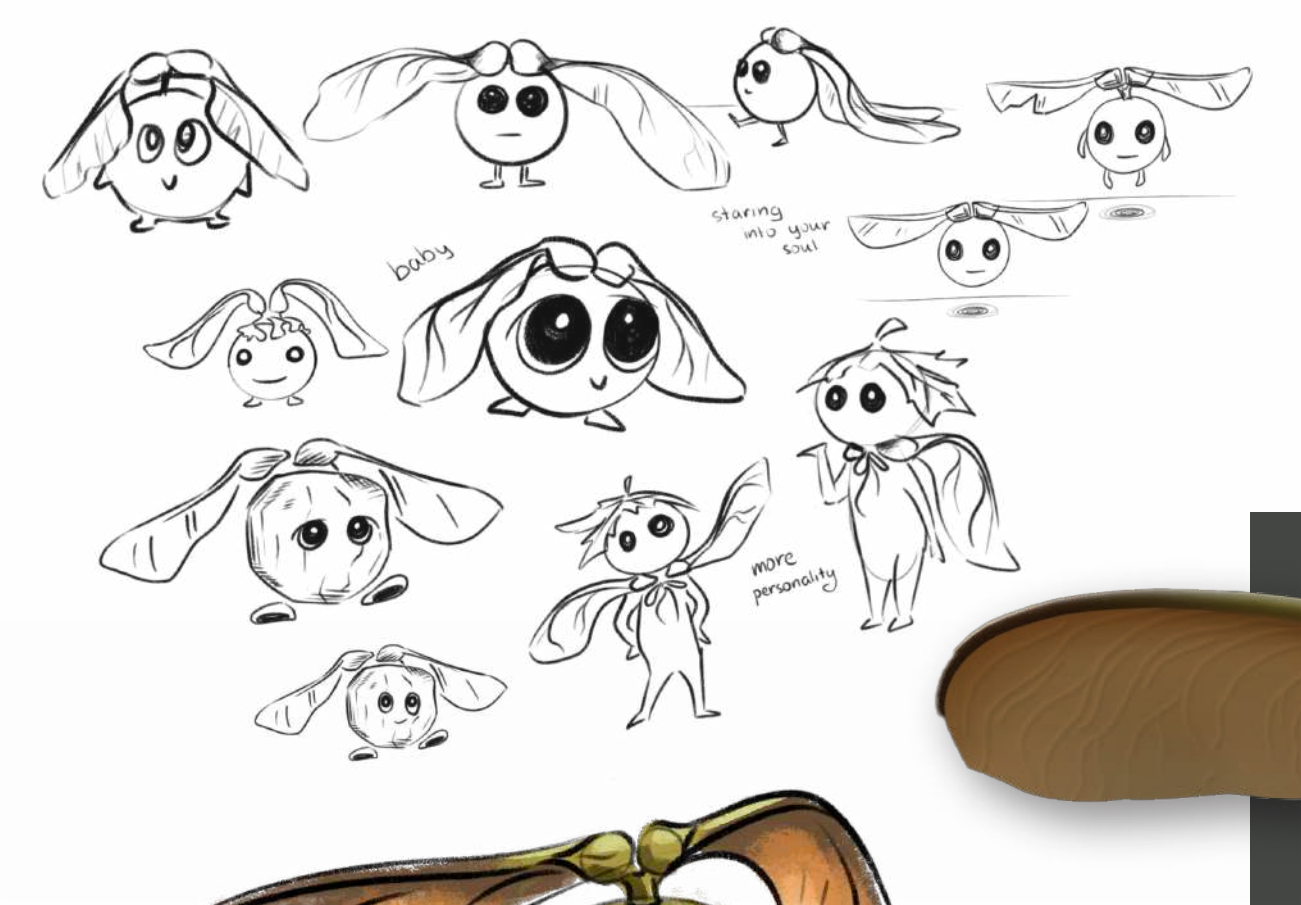
Interactive props

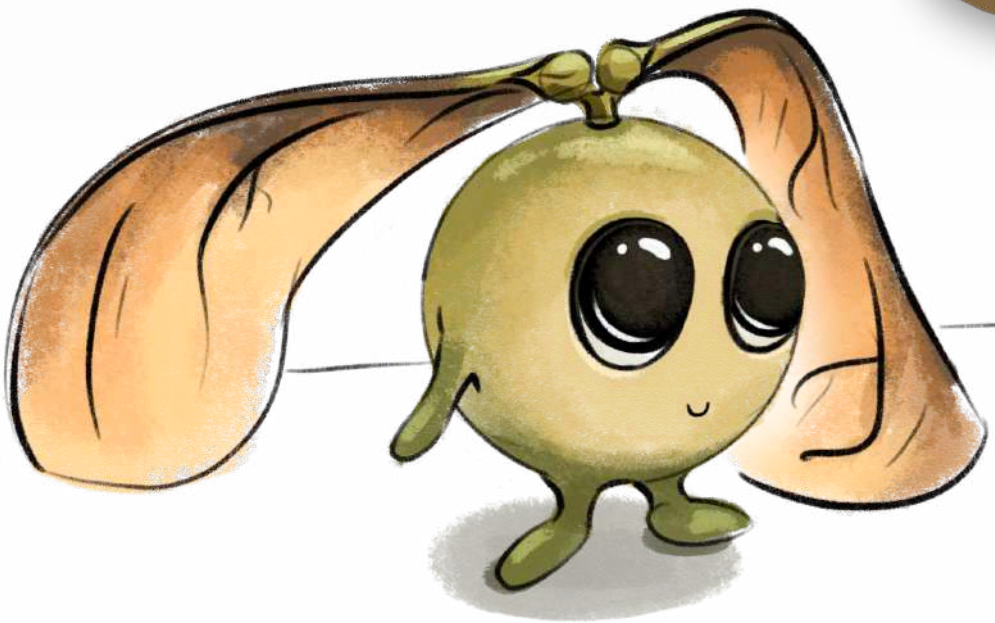
These devices are core interactive elements of an upcoming ghost-hunting–themed escape room. Guided by the narrative and practical constraints of the experience, I designed their form, interactions, and internal mechanisms. The 3D-printed prototypes shown are fully functional and performed well during playtests. The insights gained are now informing the next iterations.

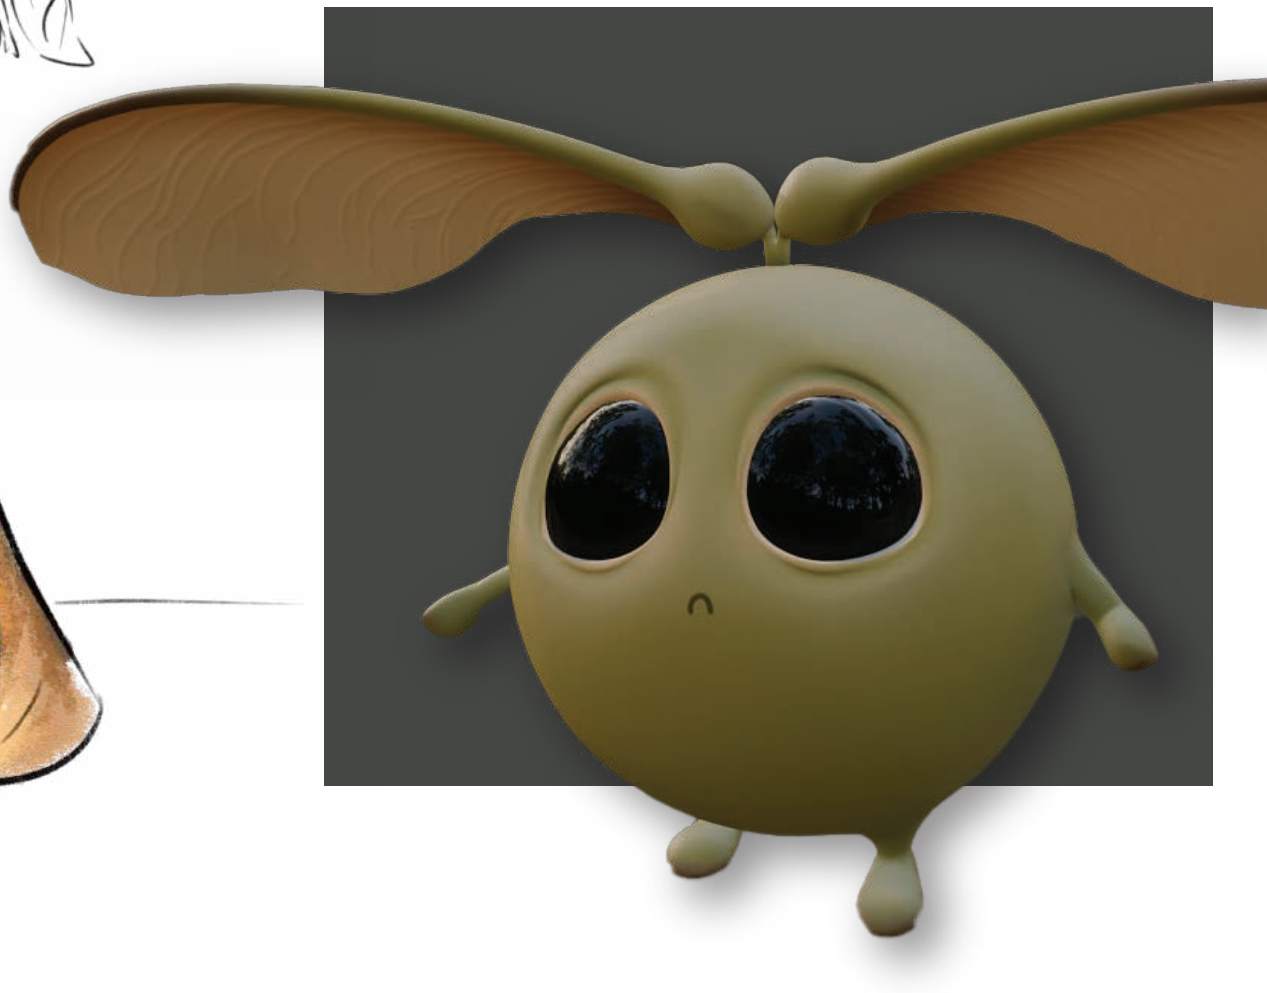
Maplum

Character development

As part of a team developing a video game, I created Maplum—a small, vulnerable creature inspired by a maple seed. The goal was to design an adorable character that would be easy to get attached to, encouraging players to care for it. This page shows the full process, from early sketches to the final 3D model, which I made and animated in Blender.



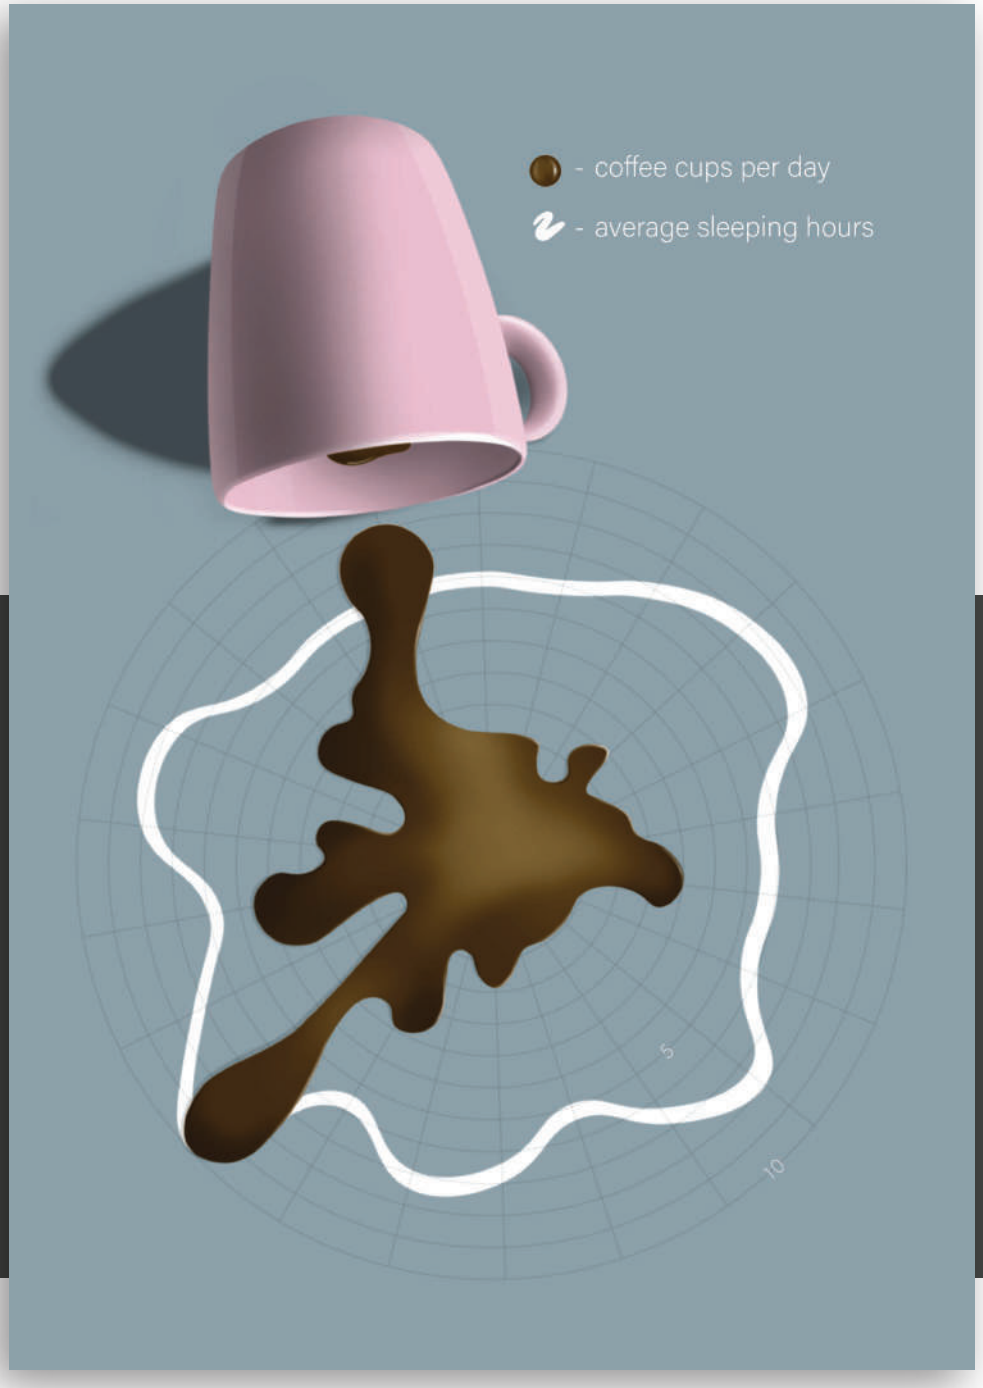




Maplum

Animation

This animation plays before the game starts and serves as a backstory for Maplum, introducing the main character and giving the player insight into his situation. I created all the visuals myself, bringing the story to life through animation.



Sip or Sleep?

Data Visualisation

How many hours of sleep do you usually get each night? How many cups of coffee do you drink a day on average? I gathered answers from 21 students and visualized this data.

The intent was to integrate the graph into the design in a way that draws the viewer in through interesting shapes, with the message gradually becoming clear.

Baby Carrier Design

To develop this product, my team worked closely with a pregnant woman to meet her specific needs and preferences. Together, we created a product that offers comfort for both mother and baby. The design includes support for the neck and lower back, allowing her to relax while keeping her hands free and maintaining close physical contact with her child.

The carrier's design is inspired by a sloth, with the baby's head resting where the sloth's would be. The client, who enjoys relaxing on the sofa, loved this playful concept. A prototype of the design is shown in the pictures.

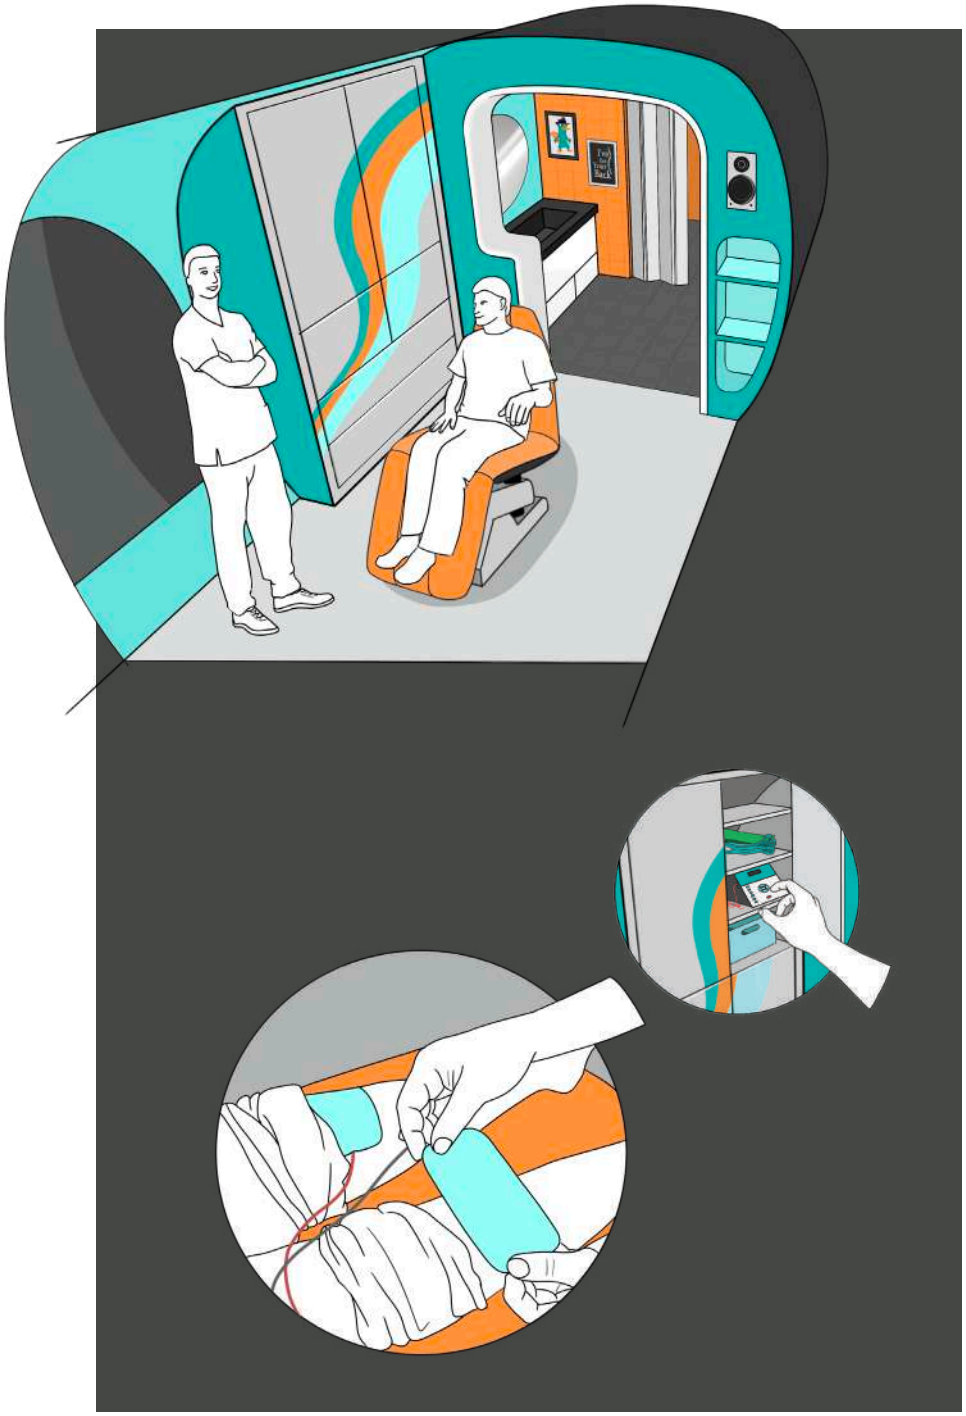
Styling Exercise

The project explores styling for an alternative to the Apple Pencil. This page showcases the journey from initial shape studies that inspired the design, through ideation, to the final product.

Mobile Workspace

Design Case

For this design case, I created a mobile workspace for a physiotherapist that could travel by water. The boat is designed to carry all the necessary equipment for a fully functional practice, combining practicality with a vibrant, modern look.

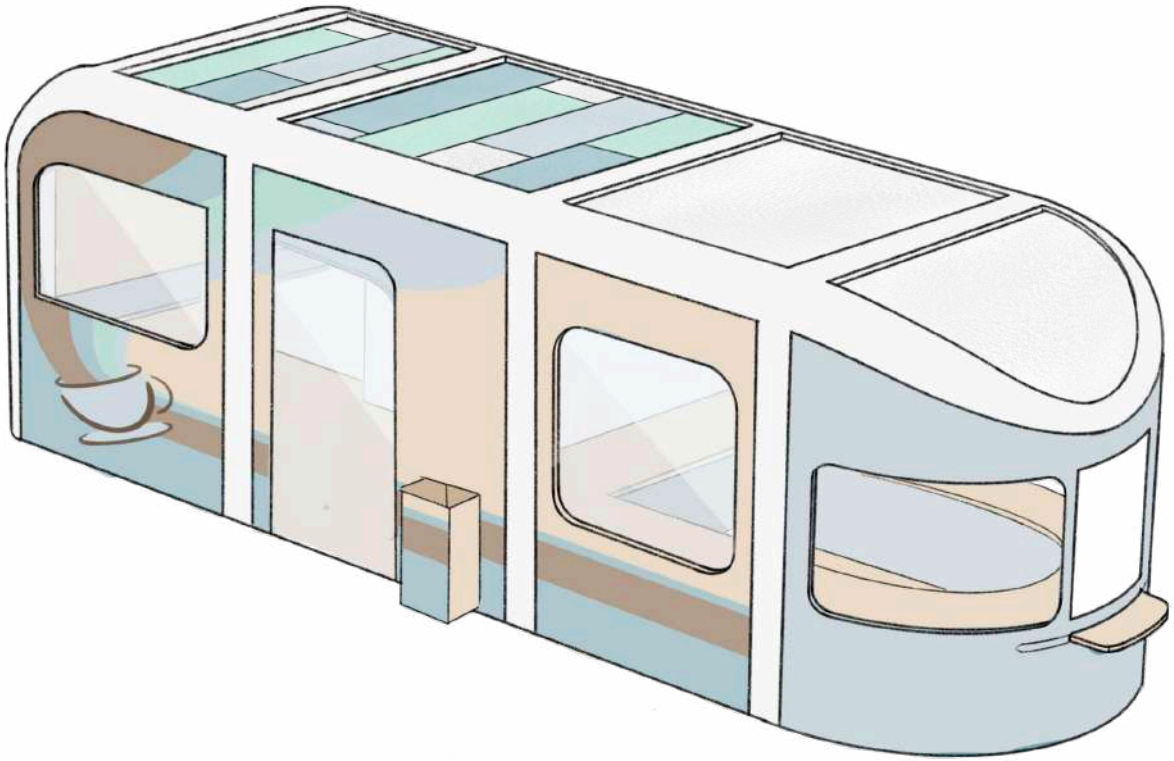


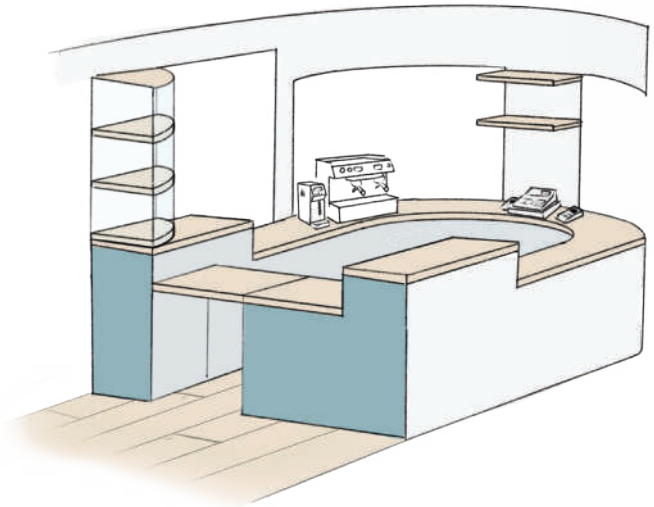
Collages

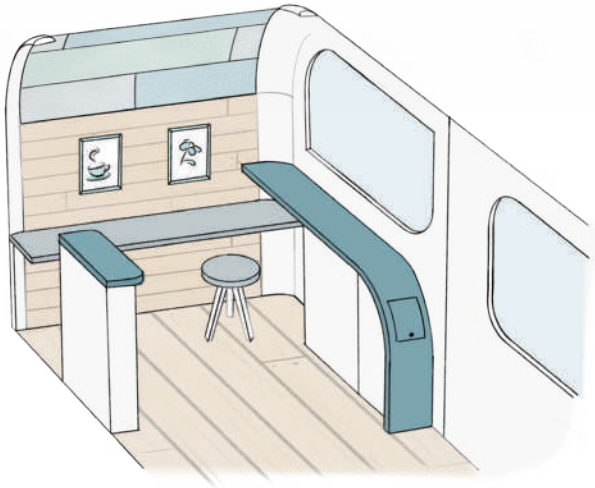
The first collage reflects on the concept of time, exploring its often overwhelming nature. The second collage is a moodboard including abstract elements that resonate with me.
I enjoy working in this style, finding new meanings in combinations of simple elements. I love experimenting with contrasts and telling stories through composition.

Coffee Kiosk

This mobile coffee kiosk was designed for the Enschede train station, offering a place for people to order their coffee from the outside while providing a comfortable, relaxed space inside for waiting passengers. The design aims to offer a calming escape from the hectic environment of the station, with soft colors and rounded shapes chosen to create a peaceful atmosphere.







Business Cards

Tea Enthusiast

This was part of an assignment for my graphic design class, where I had to create several business cards, each showcasing an aspect of my identity.

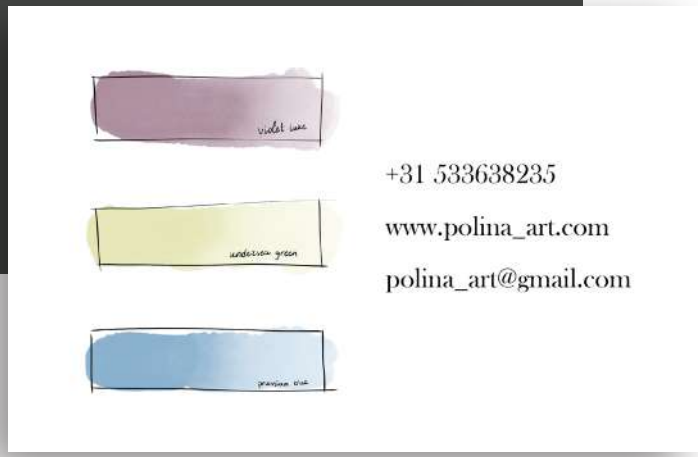
The compositions I created for the photos complement the designs, presenting tangible results of my work.

This card might be the most important - at least to my tea-loving side. It's always brought me comfort, and I hope the illustrations I made capture some of the coziness I associate with it.

Business Cards

Crocheter

The goal was to design a crocheting business card that challenges the common perception of this hobby as old-fashioned. By using simple lines and bold contrasts, I aimed to create a fresh, modern look.



Business Cards

Artist

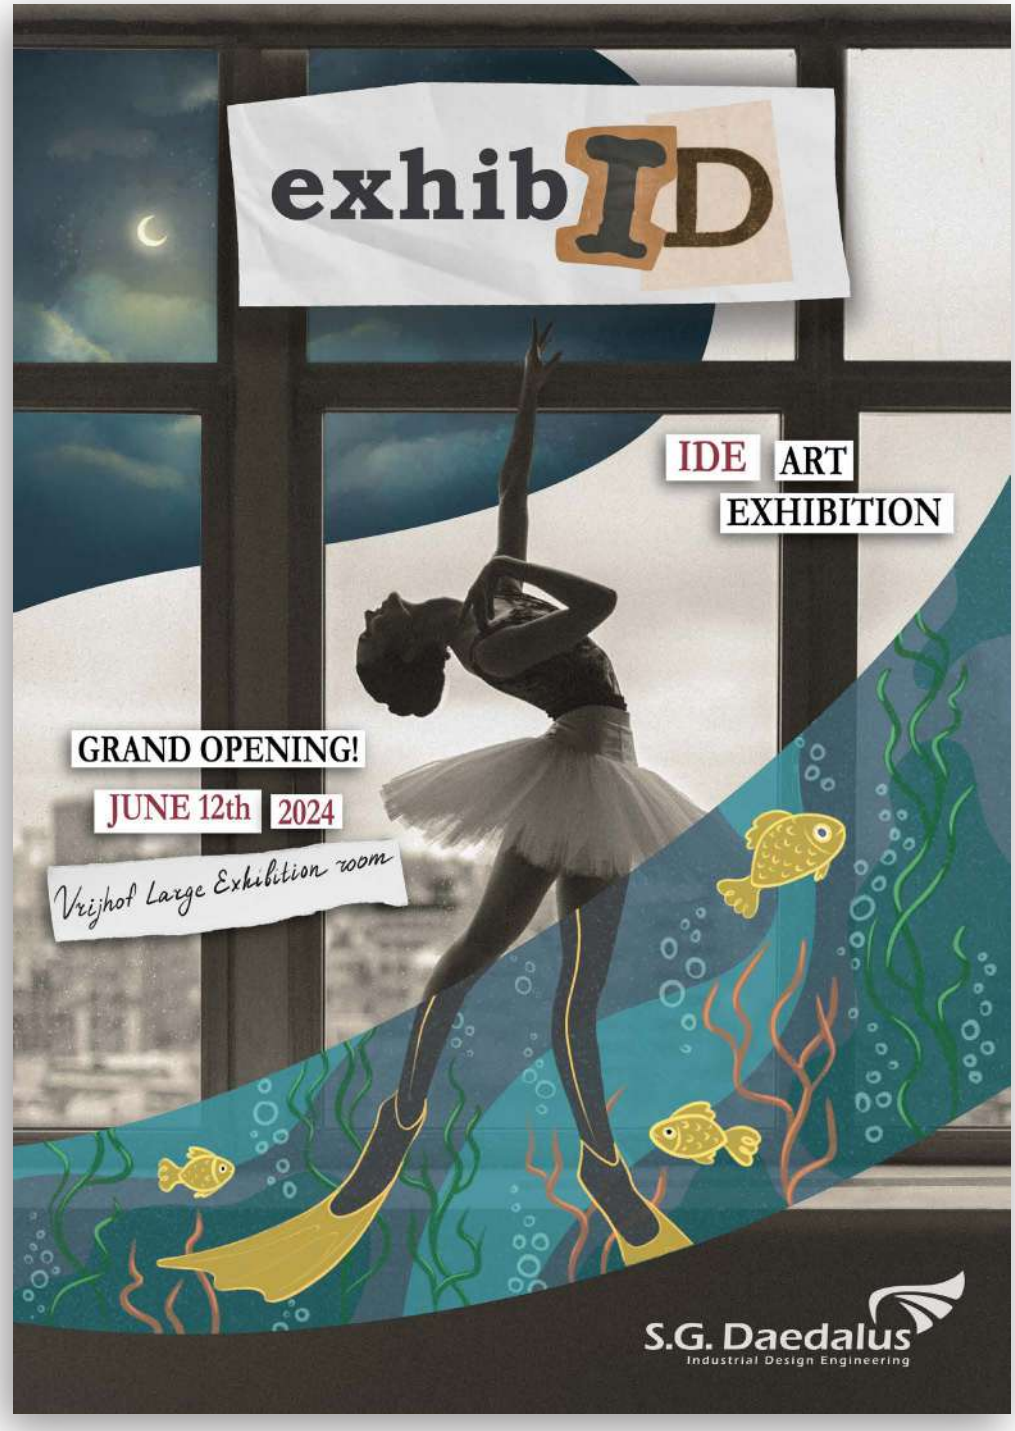
This design mimics watercolor swatches, as if the artist were using the card to test new colors.

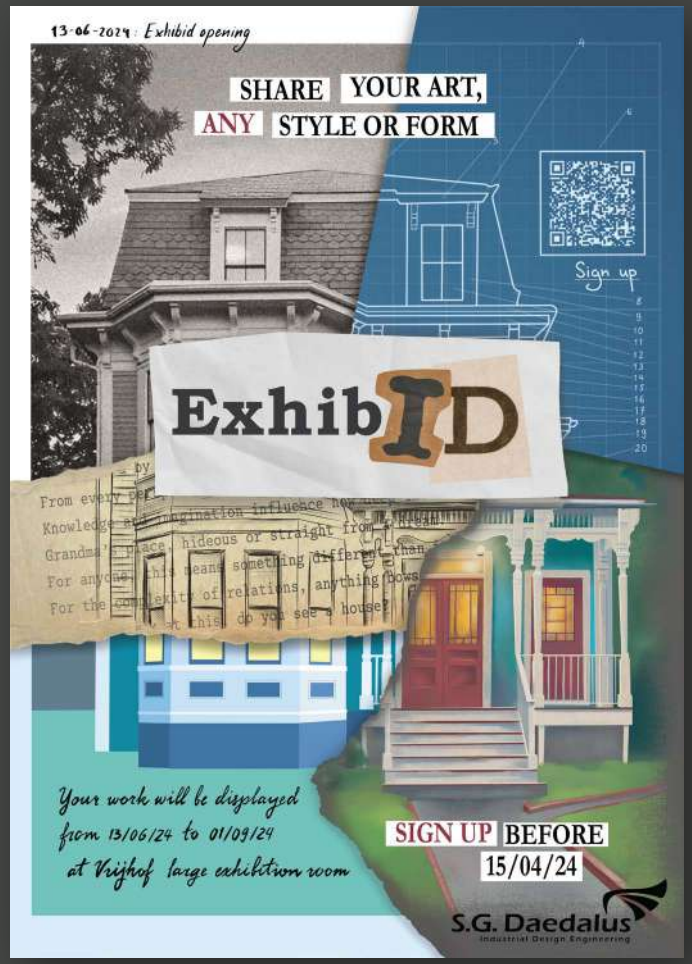
The photo also features my pocket-sized watercolor set, paired with a snippet from one of my watercolor sketches.

Teapot

Concept Sketch

This teapot design is inspired by a witchy, whimsical theme, combining elements of magic and nature. The teapot features a simple spherical glass base, reminiscent of a crystal ball, paired with an intricate handle that resembles interlinked plant vines. The design also includes a cylindrical base, which houses a candle to keep the tea warm.





Exhibition Posters

I designed these posters to promote the art exhibition I organized with my committee. The core idea of ExhibID is that art comes in all shapes and forms, with people finding their own unique ways to express themselves. I wanted the posters to reflect this by emphasizing the diversity of artistic expression.
